Definitions

*** Definition of Poverty:** *The Capital Area Food Bank serves a region that has a higher cost of living than many other regions in the U.S. Therefore, the food bank defines hunger/poverty based upon 185% of the federal poverty guidelines. This means that a household may earn up to 185% of the U.S. government's standard of poverty and still be considered "in poverty." This measure (and other multiples such as 125%, 150% and even 200% of poverty) is utilized to determine eligibility for many government programs.*

**** Data comes from Feeding America's Map the Meal Gap:** *Feeding America first published the Map the Meal Gap project in early 2011, with the generous support of the [Howard G. Buffett Foundation](#) and [The Nielsen Company](#), to learn more about the face of hunger at the local community level. The project helps food banks better identify strategies for reaching the people who most need food assistance. In August, 2011, with the support of the [ConAgra Foods](#)*

[Foundation](#), child food insecurity data was added to the project. The 2013 Map the Meal Gap project reflects 2009-2011 data and will be updated every year with new data.

*** **Food Insecurity:** *Limited or uncertain availability of nutritionally adequate and safe foods or limited or uncertain ability to acquire acceptable foods in socially acceptable ways.*

**** **Data comes from *County Health Rankings*:** The [County Health Rankings](#) measure the health of nearly all counties in the nation and rank them within states. The Rankings are compiled using county-level measures from a variety of national and state data sources. These measures are standardized and combined using scientifically-informed weights.
